VIC Localities Run Planner – Project To■Do List

Status snapshot and next steps (pause point)

✔ What is DONE (working now)

- Victorian locality (suburb) polygons loaded and displayed correctly
- Clickable locality polygons with correct geographic alignment
- User■created runs (no predefined runs)
- Run = Run number + Driver name (editable)
- Validation on run numbers (2–4 digits, numeric only)
- Polygon colouring by assigned run
- Run number label rendered on map
- Floating run legend on map (auto■updates)
- Per■locality assignment: run, deliveries, boxes
- Local storage persistence (browser■only prototype)
- Delete run clears that run from all localities
- Floating Assigned Localities panel on map
- Assigned panel supports unlimited rows with scroll
- Click assigned row → zoom + select polygon
- Reset / clear behaviour confirmed

■ Next steps (Prototype polish – Manager demo)

- Partial locality search with suggestions (type■ahead)
- Clickable search results → zoom + select locality
- Assigned localities table export to CSV / Excel
- Runs list export to CSV / Excel
- Add notes field per locality (optional)
- Add assignment date selector (today / tomorrow)
- Improve hover highlight and selection outline
- Tidy UI wording (remove prototype language)

■ Team■shared version (future sprint)

- Backend API (FastAPI or Node)
- Database (SQLite → PostgreSQL)
- Shared runs and assignments across users
- Simple user identity (who changed what)
- Audit trail (timestamp + user)
- Basic role separation (viewer vs dispatcher)

■ Portfolio / Documentation

- README explaining problem, solution, and architecture
- Screenshots of map, legend, and assigned panel
- Short demo script (60–90 seconds)
- Clean folder structure (frontend / backend)
- Commented code and rationale for decisions
